Semen collection. Young bulls were trained for semen collection when they were 1 to 1.5 years of age. Semen was collected and used to produce those bulls when bulls were older than 1.5 years. Semen collection was done once a week for 1 to 1.5 yr old bulls, and twice a week if bulls were older than 3 yr of age. Semen collection was done until each one of them had produced 25,000 doses of frozen semen.

At each semen collection, bull ID, collection date and time, ejaculation number, and collection volume were recorded. Semen collected was used to produce frozen semen when bulls were older than 1.5 years. Semen collection was done once a week for 1 to 1.5 yr old bulls, and twice a week if bulls were older than 3 yr of age. Semen collection was done until each one of them had produced 25,000 doses of frozen semen.

RESULTS AND DISCUSSION
